

Install Printers and Sharp MFD on Chromebooks

Chromebooks will automatically install an application named "Mobility Print" to manage which printers are available.

1. When printing something on a Chromebook, select the desired printer from the "Destination" drop down menu that is displayed on the Print Dialog window. Select "**See more...**" to see all the printers that are available to you.

2. After clicking on "See more..." a PaperCut authentication window may be displayed. Enter your HCPSS Active Directory credentials and click "**Sign in to print**".

3. Select the printer from the list that you want to print to. Each printer with the green "P" icon next to it is available to you. The "**Mobility_Print**" queue is available to all staff and prints to the **Sharp MFD devices**.
