**Install Printers and Sharp MFD on Chromebooks**

*Chromebooks will automatically install an application named “Mobility Print” to manage which printers are available.*

1. When printing something on a Chromebook, select the desired printer from the “Destination” drop down menu that is displayed on the Print Dialog window. Select “See more…” to see all the printers that are available to you.

2. After clicking on “See more...” a PaperCut authentication window may be displayed. Enter your HCPSS Active Directory credentials and click “Sign in to print”.

3. Select the printer from the list that you want to print to. Each printer with the green “P” icon next to it is available to you. The “Mobility_Print” queue is available to all staff and prints to the **Sharp MFD devices**.
